

RETROFIT • FFS Series

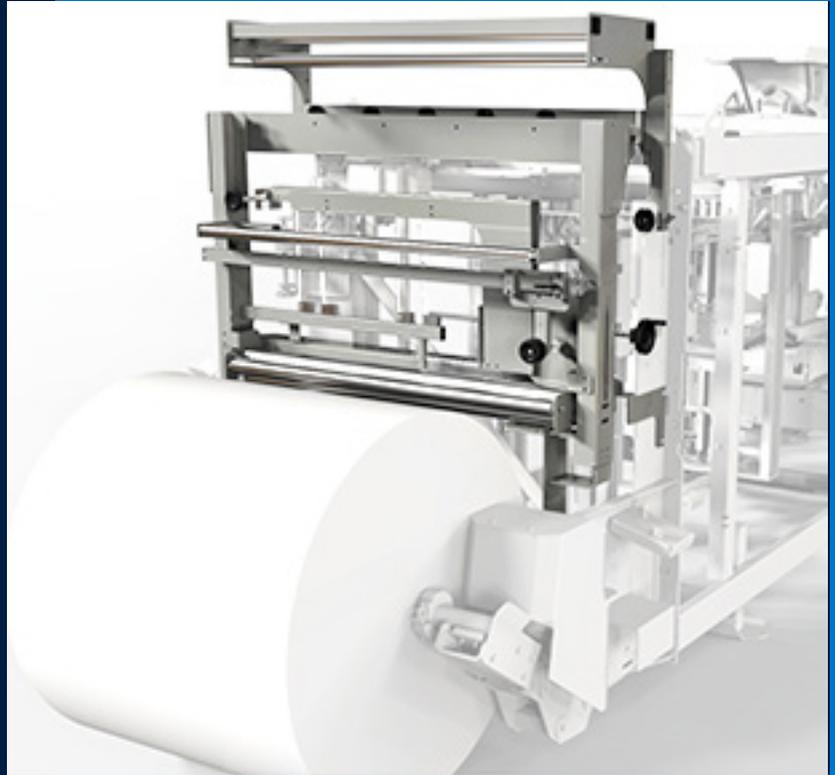

Gusset Former Retrofit

Add increased sturdiness and volume to your bags

This device creates a bottom gusset in the bags. It also comes with a variable frequency drive (VFD) that permits constant film unrolling as well as a brake system that regulates film tension.

Retrofit main benefits

- ✓ Increased Bag Volume
- ✓ Smoother Operation

New Gusset Former Retrofit

Increased Bag Volume

This device allows the formation of 3" to 6" (7 to 15cm) deployed bottom gusset in the bag. It does this by using a flat wheel that pushes the folded side of the U-film between two parallel arms to the desired depth. This gusset expands the bag's original capacity.

Smoother Operation

This retrofit allows the film to be unrolled easily and an incorporated brake regulates film tension.

*It is strongly recommended to use thin film (*up to 1/8" or 3mm) for best results.
